

Ph.D. Student Evaluation – Ing. Pavlína Holčapková

Ing. Pavlína Holčapková started her PhD study at the Polymer Centre, Faculty of Technology, Tomas Bata University in Zlin in September 2014. Since then she has done a great progress in the field of antimicrobial polymer systems. The results related to her PhD studies were published in 3 scientific journals. Besides that, she co-authored another 5 manuscripts in the journals with impact factor. Furthermore, she has participated on creation of 4 results of applied research (utility model, functional samples, pilot scale). Her professional competences were improved through mobility stays at the research organizations in Austria (WOOD K PLUS, Kompetenzzentrum Holz GmbH Linz, 2 months) and Spain (AIMPLAS, Plastics technology centre Valencia, 3 months). Besides her regular duties connected with the PhD study, Pavlína has actively participated in research projects implemented at Centre of Polymer Systems.

Pavlína Holčapková has become an independent researcher with a good potential for further work in both R&D institutions and practise. In addition, I would like to highlight her personal character qualities that include diligence, reliability and willingness to help others.

On the basis of this, I fully recommend Ing. Pavlína Holčapková for the award of the PhD degree.

In Zlin, 12 December 2018

prof. Ing. Vladimír Sedlařík, Ph.D.

Supervisor
