

Ph.D. Student Evaluation – Maliheh Amini Moghaddam

Maliheh Amini Moghaddam started her PhD study at the Polymer Centre Faculty, of Technology, Tomas Bata University in Zlin in September 2016. Since then she has done a good progress in the field of biodegradable polymers. The results related to her PhD studies were published in 2 scientific journals. Besides that, she has co-authored another 2 manuscripts in the journals with impact factor.

Her professional competences were improved through mobility stays at the Monash University, Melbourne, Australia (6 months). Additionally, to her regular duties connected with the PhD study, Maliheh actively participated in research projects implemented at Centre of Polymer Systems.

Maliheh Amini Moghaddam has become an independent researcher with a good potential for further work in both R&D institutions. On the basis of this, I fully recommend Maliheh Amini Moghaddam for the award of the PhD degree.
