

Tutor's statement on the thesis by Ahmad FayyazBakhsh

With great pleasure, I write to recommend Ahmad FayyazBakhsh's for the defense of his doctoral thesis, titled "Investigating the influence of different additives on the mechanical properties and biodegradation of PHB and PBS." Over the past four years, I have had the privilege of serving as supervisor, and I can affirm that their work is of a very good standard.

The student has demonstrated a remarkable work ethic, intellectual curiosity, and understanding of his research area. Their thesis represents a significant contribution to the field of biodegradable polymer materials, showcasing their technical prowess and ability to engage with complex concepts.

The student helped design or independently designed and executed experiments, analyzed data precisely, and drew insightful conclusions. He also possesses the ability to synthesize information from diverse sources and integrate it into a coherent and compelling argument.

Moreover, he has been an active and collaborative member of our academic community. They have presented their research at several conferences. His collegiality and willingness to assist peers have earned them the respect of both faculty and fellow students.

He was also very proactive and independent in publishing his results, which is always very helpful to the supervisor.

I thus thoroughly recommend Ahmad FayyazBakhsh for the successful defense of his doctoral thesis.
